MY PROJECTS

Love Declarations Application

This was a university project, which consists of an application to make love declarations which can be made publicly or anonymously. These declarations are displayed as posts in the main section. Developed with React JS, SASS and Firebase.

Social Media Web Application

A small social media called Gliskup App. Users can sign up, make posts, view posts from other users, react to those posts (with different reactions types), follow other users and other features. Developed in React JS + Tailwind with Redux and Nodejs with MongoDB.

Typing Test web Application

A web application to test typing skills. In it, tests can be made with different time settings (1, 2 and 3 minutes) in English and Spanish to test velocity and accuracy when typing on the keyboard. Developed in React Js + Tailwind as CSS Framework.
